PRODUCT · OPS ROADMAP

Next Steps To-Do List

Post-demo priorities — Helcim first, then soft launch, then QuickBooks

Gym: Sully's Boxing Gym (1943) **As of:** August 2026 **Status:** Demo / core ops shipped

Owner: Quiet Agency + Sully's

Bottom line: The next real milestone is *Helcim live* — not more UI. Owner analytics, desk CASH/CARD, and the Banking / QuickBooks PDFs are the bridge until real payments ship.

Already done (context)

- Member / coach / desk / owner / TV demo flows
- Desk **CASH** / **CARD** tender on drop-ins
- Owner desk: memberships, revenue, waivers, walk-ins, demographics, group messages
- Ops PDFs: Banking (Helcim), QuickBooks Integration, Client Demo Guide

1. Owner / business — this week

- ☐ Open Helcim Canadian sandbox + request TEC quote (memberships / drop-in / kitchen mix) **OWNER**
- ☐ Complete KYC path notes (legal name, GST/HST, bank for deposits) **OWNER**
- ☐ Confirm kids/youth vs adult product names and prices in Sully's **OWNER**
- ☐ Pick target soft-launch date and desk lead (cash drawer owner) **OWNER**
- ☐ Follow Banking PDF checklist before sending API secrets to Quiet Agency **OWNER**

2. Real payments — highest engineering priority

- ☐ Implement `PaymentProvider` abstraction (mock + Helcim; wrap legacy Stripe) **ENG**
- ☐ Helcim adapter: customer, pay, subscribe, refund, webhooks, idempotent `PaymentEvent` **ENG**
- ☐ Feature flag `PAYMENT_PROVIDER=helcim` on Railway; secrets never in git **ENG**
- ☐ Online join / membership checkout on Helcim (sandbox acceptance matrix) **ENG**
- ☐ Wire desk **CARD** to Helcim terminal; keep **CASH** on Sully ledger only **ENG**
- ☐ Owner desk still shows cash vs card correctly after live charges **QA**

3. Soft launch hardening

- ☐ Replace demo-only shortcuts where they confuse real staff **ENG**
- ☐ Real member invites (not only `@sullys.local` demo accounts) **OWNER + ENG**
- ☐ Coach headshots + any remaining TV / carousel polish **DESIGN**
- ☐ Full dry-run: join → waiver → book → check-in → drop-in CASH/CARD → owner totals match drawer **ALL**
- ☐ Confirm staff CORS / logins on production staff URL **QA**

4. Accounting — after Helcim is trusted

- ☐ Phase A: CSV export from Owner desk for bookkeeper (date, tender, amount, product, externalId) **ENG**
- ☐ Map income accounts with accountant (adult / youth / drop-in / fees) **OWNER**
- ☐ Phase B: QuickBooks Online OAuth + nightly idempotent sync **ENG**
- ☐ Avoid double-post if Helcim's own QBO sync is also on **OWNER + ENG**
- ☐ Follow QuickBooks Integration PDF acceptance checklist **QA**

5. Product depth — after live billing

- ☐ Kitchen / merch paid checkout on same payment abstraction **ENG**
- ☐ Push / SMS for group messages (today = in-app threads only) **ENG**
- ☐ WebSocket (or better realtime) for TV timer sync — polling works today **ENG**
- ☐ Kids program depth, progression / passport, Command Center (long roadmap) **PRODUCT**

Suggested order (do not reshuffle lightly)

#	Milestone	Exit when…
1	Owner Helcim + pricing decisions	Sandbox open; quote in hand; products confirmed
2	Helcim membership + desk CARD	Sandbox matrix green; flag ready for production
3	Soft launch dry-run	One full day ops with matching cash + owner totals
4	QuickBooks Phase A → B	Bookkeeper imports clean; no duplicate sales
5	Depth features	Billing stable for 2+ weeks

Companion docs

Doc	File
Banking & Helcim setup	`Sullys-Banking-Payment-Setup.pdf`
QuickBooks integration	`Sullys-QuickBooks-Integration.pdf`
Client demo test guide	`Sullys-Client-Demo-Test-Guide.pdf`
Payment architecture	`docs/03-architecture/08-proprietary-payment-platform.md`

Immediate ask for Quiet Agency: Start Helcim `PaymentProvider` scaffold when owner confirms sandbox credentials are ready.
