Banking & Payment Setup

Helcim first · Sully's remains source of truth · QuickBooks later

Gym: Sully's Boxing Gym (1943) **Doc:** Separate from client demo guide **Date:** August 2026

Audience: Owner + Quiet Agency

Rule: Helcim (or any bank processor) is a *service*. Membership status, waivers, XP, desk cash sales, and owner analytics live in **Sully's**. Never store card numbers in our app.

1. What is live today vs what this guide enables

Capability	Today	After banking setup
Desk drop-in CASH / CARD	Live (cash logged; card = desk tender label)	CARD charges via Helcim terminal / HelcimPay
Owner revenue / walk-in analytics	Live from PaymentEvent ledger	Same ledger + Helcim settlement reports
Online membership checkout	Mock (or legacy Stripe if keys set)	Helcim recurring + vault
QuickBooks	Planned (not connected)	Export after Helcim is stable

2. Open Helcim (owner steps)

1. Go to helcim.com → create a **Canadian merchant** account for Sully's Boxing Gym.
2. Complete business KYC: legal name, GST/HST, void cheque / bank account for deposits, owner ID.
3. Ask Helcim for a **TEC quote** using your mix (memberships ~70%, drop-in ~15%, kitchen/merch ~15%).
4. Enable products you need:
 - Online payments (HelcimPay.js / Payment API)
 - Recurring billing (plans + subscriptions)
 - Smart Terminal or card reader for front desk
 - Webhooks
5. In Helcim dashboard → **Integrations / API**, create API credentials for *production* and keep a separate *sandbox* set for testing.

Banking checklist

- ☐ Business bank account ready for Helcim payouts

- ☐ Void cheque / direct deposit form submitted
- ☐ GST/HST number on file
- ☐ Statement descriptor agreed (e.g. SULLYS BOXING)
- ☐ Chargeback / fraud contacts named (owner + Quiet Agency)

3. Secrets to give Quiet Agency (never commit to git)

Store only in Railway (API) and Vercel env — not in chat logs long-term.

Env var (recommended)	Where	Purpose
<code>PAYMENT_PROVIDER=helcim</code>	Railway API	Feature flag off mock / Stripe-first path
<code>HELCIM_API_TOKEN</code>	Railway API	Server API auth
<code>HELCIM_ACCOUNT_ID</code>	Railway API	Merchant account id
<code>HELCIM_WEBHOOK_SECRET</code>	Railway API	Verify webhook signatures
<code>HELCIM_TERMINAL_ID</code> (optional)	Railway API	Desk Smart Terminal
<code>NEXT_PUBLIC_HELCIM_PAY_TOKEN</code> (if required)	Vercel web only	Hosted fields / HelcimPay.js — never the secret API token

Do not put `HELCIM_API_TOKEN` in the staff or web client. Desk CASH continues to write to Sully's ledger without Helcim.

4. Engineering cutover (Quiet Agency)

1. Confirm architecture doc: `docs/03-architecture/08-proprietary-payment-platform.md`
2. Sandbox: create test customer → charge → subscribe → refund → duplicate webhook.
3. Wire Helcim adapter behind `PaymentProvider`; keep mock for demos.
4. Webhook URL (example): `https://api.sullys1943.com/api/v1/webhooks/helcim`
5. Idempotency on `PaymentEvent.externalId` — no double membership / XP.
6. Flip `PAYMENT_PROVIDER=helcim` for new memberships only; leave historical mock/Stripe rows alone.
7. Desk: CASH stays local ledger; CARD can call Helcim terminal when hardware is paired.
8. Smoke test Owner desk: cash vs card tenders appear in "Money to Sully's".

5. Front desk hardware

1. Order Helcim Smart Terminal (or approved reader) for reception.
2. Pair device to the Helcim account; note terminal ID for env.
3. Train desk staff:
 - **CASH** → Staff app drop-in CASH (drawer + Sully ledger)
 - **CARD** → Terminal tap/chip, then confirm in Staff (or auto via API)

4. End-of-day: cash drawer count vs Owner “today · CASH” total.

6. QuickBooks (later — after Helcim is live)

Not enabled yet. Planned path:

1. Create QuickBooks Online company for Sully’s.
2. Connect via OAuth app (or nightly CSV export from Owner analytics).
3. Map: memberships → Income; drop-in cash/card → Sales; kitchen later.
4. Never push card PANs; only settled amounts + dates + tender type.

7. Go-live acceptance checklist

- ☐ Sandbox membership join succeeds + webhook idempotent
- ☐ Failed card does not activate membership
- ☐ Desk CASH drop-in shows under Owner revenue by tender
- ☐ Desk CARD path posts to Helcim and matches ledger
- ☐ Refund creates matching PaymentEvent
- ☐ PCI: no card fields on sullys1943.com forms (hosted fields / terminal only)
- ☐ Owner can still message youth / adult / unsigned-waiver groups

8. Contacts & links

Item	Value
Member site	www.sullys1943.com
Staff / Owner	sullys1943-staff.vercel.app
