QuickBooks Integration

Sully's ledger → QuickBooks Online · after Helcim banking is live

Gym: Sully's Boxing Gym (1943) **Doc:** Separate from demo + banking PDFs **Date:** August 2026

Audience: Owner + accountant + Quiet Agency

Order of operations: Finish *Banking & Payment Setup (Helcim)* first. QuickBooks receives **settled totals** from Sully's — never card numbers, never membership status as the source of truth.

1. Goal

Keep day-to-day gym ops in Sully's (memberships, desk CASH/CARD, waivers, walk-ins, owner analytics). Push clean accounting data into **QuickBooks Online (QBO)** so bookkeeping stays accurate without double-entry at the desk.

2. What stays in Sully's vs QuickBooks

Data	Sully's (source of truth)	QuickBooks
Member / youth / adult profiles	Yes	Optional Customer names only
Membership active / past_due	Yes	No (income only)
Waivers, check-ins, XP	Yes	No
Desk CASH / CARD / Helcim settlement	PaymentEvent ledger	Sales receipts / deposits
GST/HST, chart of accounts	No	Yes (accountant-owned)
Payroll, rent, vendors	No	Yes

3. Prerequisites (owner)

- ☐ QuickBooks Online company created for Sully's Boxing Gym
- ☐ Chart of accounts reviewed with accountant (CAD)
- ☐ Helcim merchant live (or at least sandbox validated) — see Banking PDF
- ☐ Owner desk showing cash vs card revenue correctly for 1–2 weeks
- ☐ Admin Intuit account that can authorize apps (company admin)

4. Recommended account mapping

Confirm labels with your bookkeeper before go-live. Typical CAD gym map:

Sully's stream	Suggested QBO account	QBO type
Adult monthly / trial	Membership income — Adult	Income
Youth / kids membership	Membership income — Youth	Income
Drop-in / walk-in	Drop-in & day pass	Income
Kitchen / merch (later)	Retail / F&B sales	Income
Desk CASH	Undeposited Funds → Bank deposit	Asset / Bank
Card / Helcim payout	Helcim Clearing → Operating bank	Asset / Bank
Processor fees	Merchant / payment processing fees	Expense
Refunds	Same income account (negative) or Sales returns	Income / contra

5. Integration phases

Phase A — Manual export (fastest, safe)

1. Owner desk → review “Money to Sully’s” (today / month by tender).
2. Quiet Agency adds CSV export: date, type, tender, amount CAD, membership product, externalId.
3. Import into QBO via **Sales** → **Import** or accountant spreadsheet.
4. End of day: cash drawer count must match Owner “CASH” total.

Phase B — Nightly sync (recommended production)

1. Create Intuit Developer app → QuickBooks Online → OAuth 2.0.
2. Owner authorizes Sully’s app once (redirect to staff/owner admin).
3. Store tokens encrypted in Railway secrets (never in git / browser).
4. Nightly job posts SalesReceipts / JournalEntries for completed `PaymentEvent` rows not yet synced.
5. Idempotency key = `PaymentEvent.externalId` (no duplicates).
6. Owner UI shows QuickBooks: Connected · last sync · errors.

Phase C — Optional Helcim ↔ QBO

Helcim may offer its own QBO sync for card settlements. If enabled, **do not double-post** the same card sale from Sully’s and Helcim. Prefer: Sully’s posts membership/drop-in income; Helcim feeds bank deposit / fee detail only — or Sully’s alone posts everything and Helcim sync stays off.

6. Secrets for Quiet Agency

Env var	Where	Purpose
<code>QUICKBOOKS_CLIENT_ID</code>	Railway API	Intuit app client id
<code>QUICKBOOKS_CLIENT_SECRET</code>	Railway API	Intuit app secret
<code>QUICKBOOKS_REALM_ID</code>	Railway API	Company id after OAuth
<code>QUICKBOOKS_REFRESH_TOKEN</code>	Railway API (encrypted)	Long-lived refresh
<code>QUICKBOOKS_ENV=sandbox production</code>	Railway API	Target Intuit environment
<code>QUICKBOOKS_SYNC_ENABLED=true</code>	Railway API	Feature flag

Never put QuickBooks secrets in Vercel web/staff public env. OAuth callback may live on API: e.g.
`https://api.sullys1943.com/api/v1/integrations/quickbooks/callback`

7. Owner connect checklist (when Phase B ships)

1. Sign in Staff as `owner@sullys.local` (or live owner account).
2. Open Owner desk → QuickBooks → **Connect**.
3. Approve Intuit permissions for the Sully's company.
4. Confirm chart mapping screen (income accounts).
5. Run **Sync now** for yesterday's completed payments.
6. In QBO, verify one cash drop-in and one card/membership sample.
7. Turn on nightly sync; leave `QUICKBOOKS_ENV=sandbox` until samples look right.

8. What we will not sync

- Card PANs / CVV / Helcim vault tokens
- Waiver PDFs or medical notes
- Coach notes, XP, class attendance
- Passwords or QR check-in tokens
- Pending / failed payments (only `completed`)

9. Acceptance tests

- ☐ Sandbox: one adult membership posts once to correct QBO income account
- ☐ Sandbox: youth membership maps to Youth income
- ☐ Desk CASH drop-in → Undeposited Funds (or agreed cash account)
- ☐ Desk CARD / Helcim → clearing + fees treated correctly
- ☐ Refund creates matching credit / negative sale

- ❑ Re-run sync does not duplicate (same externalId)
- ❑ Disconnect OAuth stops posts; reconnect resumes
- ❑ Owner desk shows Connected + last successful sync time

10. Status today

Item	Status
Owner desk QuickBooks panel	Shows “planned / not connected”
OAuth + nightly sync	Not built yet — this PDF is the build + ops plan
CSV export	Next engineering step if accountant needs numbers before OAuth
